

Queries of Middle Inkhu Hydropower Project

S.No.	Query	Response From the Cloent
1	As per ToR, The consultant shall collect 272 no. of samples in total over a period of 2 years (one sample per day for eight months i.e. 240 samples and two samples per month for 16 months i.e. 32 samples). But, in BoQ (Annex 3-B-3i), all 272 no. of samples are allocated for PSD analysis only but, no. of samples for sediment concentration is not mentioned clearly. We think that 272 nos. of samples should be concentration analysis not PSD anlaysis because it is not possible to conduct PSD of each samples during dry season because of low sediment in the river. Please clarify this.	The consuntration analysis should be carried out for each sample. PSD of the collected samples should necessarily be carried out for the wet season. During dry season, colluctive PSD analysis of more than one samples can be done if the concentration of the samples is too less to perform PDS analysis.
2	It is not mentioned in ToR in how many days DoED will provide the comments on the submitted reports.	This time period will generally be no later than two weeks after the submission of report.
